The NS can be used in vaccines, gene therapy and antisense therapy. Nucleic acids, expression vectors and contraceptive activities, expression vectors and contropic antibodies from the present invention can be used for treating and contraceptive expression, rehumation arthritis, psoriasis, contracets, restenosis, atherosclerosis, inflammation, skin disorders, contraceptive, angina, neurodegeneration, dispersed, anxiety, cardiovascular disease, epilepsy, angina, neurodegeneration, diabetes, anxiety, canticophrenia, viral disease, gastric ulcers, stroke, contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               One hundred and twenty eight novel nucleic acid sequences, useful for treating and diagnosing e.g. cancer, asthma and Alzheimer's.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 6; Page 151-152; 290pp; English.

Pred. No.:
                                                                                                                          The invention relates to an isolated polypeptide comprising a death CC domain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC Commain, by contacting a DD, DED or NB-ARC COMMIDD (NGPR-interacting Death Domain), with a candidate binding agent, or a drug detecting the association of the domain and the candidate binding agent, compared by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC commidated crosslinking, nuclear magnetic resonance (NMR), mass compared by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC spectroscopy (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell proliferation, cell adhesion, cell immunoglobulin class switching, in particular apoptosis within a cell commidation, controlled protein is useful for microbial infection and B cell commidation, controlled protein is useful for detecting a Chlamydia infection. The CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CC invention is useful for modulating the activity of oncogenic proteins, for treating a pathology caused by the accivity of oncogenic proteins, controlled pathology caused by the oncogenic proteins and for treating by attention is useful for it are useful for substitution and antibody specific for it are useful for genetal infection and antibody specific for it are useful for protein and antibody specific for it are useful for substitution, allergy, caused by the oncogenic proteins. The protein and antibody specific for it are useful for protein is useful for treating immune-based pathologies, pathologies associated with cell division, inflammatory diseases such as sepsis, fibrosis, therapy and gene therapy. The present securate is human DEAD DED protein
                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 175;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polypeptide comprising a death domain or death effector domain, useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases.

Query Match:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC domain (DED) proteins and nucleic acids encoding them. The invention also CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein (CTDD) DD and neural growth factor CC receptor-interacting death domain (NIDD) DD. The invention is useful for CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC NB-ARC domain from DAR3, IRAK4, CTDD, DED4 or NIDD with a candidate binding agent and identifying an effective agent (e.g. protein or drug) that binds a DD, DED CC binding agent and identifying an effective agent (e.g. protein or drug) that modulates the association of a DD, DED4 or NB-ARC domain with protein CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC modulating the level of cell process such as apoptosis, cell adhesion, CC cell proliferation, cell stress responses to microbial for CC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are CC useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allergy, allograft rejection, sepsis and other diseases. CC DD, DED or NB-ARC domain proteins are used to treat infection, allergy, autoimmunity, inflammation, allograft rejection, sepsis, keratinocyte CC inflammatory hyperplasia, keloid, benign prostatic hypertrophy, fibrosis, CC inflammatory hyperplasia and smooth musele cell proliferation in arteries CC inflammatory hyperplasia and smooth musele cell proliferation in arteries CC inflammatory hyperplasia and smooth musele cell proliferation in arteries CC inflammatory hyperplasia and smooth musele cell proliferation in arteries CC inflammatory hyperplasia and smooth musele cell proliferation in also used in CC antibody therapy and gene therapy. The present sequence is human DED4 DED CC protein. The DEDD gene is located on chromosome l
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US-10-030-271-1 (1-909)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Percent Similarity:

                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S disorders.                                                                                                                                                                                    The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemotactioned activity, haemostatic and thrombolytic activity, chemotactic/chemotactioned the activity, haemostatic and thrombolytic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-10-030-271-1 (1-909) x AAM39805
This is the amino acid sequence of human FLAME-2, or FADD-like apoptotic/anti-apoptotic molecule 2. FLAME-2 is a novel anti-apoptotic protein that is similar in structure to FADD, but its C-terminal region does not have death domain homology. Its structure suggests that it could be an adaptor molecule for an as yet unidentified signalling complex. FLAME-2 interacts weakly with Mch4 and Mch5 but does not interact with FADD. It can abrogate UV-induced apoptosis and to a lesser degree inhibit ras/TMFR-induced apoptosis in the same cell line. The FLAME-2 amino acid sequence was deduced from the nucleotide sequence of an isolated EST (see AAV74137). Host cells, recombinant vectors, and methods of using FLAME-2 to identify substrates, activators or inhibitors of FLAME-2 are provided. FLAME-1 (see AAW90107), FLAME-2 and agonists can be used to inhibit apoptosis, e.g. for treating HIV infection or Alzheimer's disease.
                                                                                                                                                                                                                                 New isolated FADD-like anti-apoptotic molecules - used to develop apoptotic and anti-apoptotic agents for treating, e.g. HIV infection, Alzheimer's disease or neoplastic conditions.
                                                                                                                                                                                                       Claim 8; Page 41-42; 68pp; English.

                                     This is the amino acid sequence of mouse FLAME-2, or FADD-like apoptotic/Anti-apoptotic molecule 2. FLAME-2 is a novel anti-apoptotic protein that is similar in structure to FADD, but its C-terminal region does not have death domain homology. Its structure suggests that it could be an adaptor molecule for an as yet unidentified signalling complex. FLAME-2 interacts weakly with Mc14 and Mch5 but does not interact with FADD. It can abrogate UV-induced apoptosis and to a lesser degree inhibit FADD. It can abrogate UV-induced apoptosis and to a lesser degree inhibit FAB/TNFR-induced apoptosis in the same cell line. The FLAME-2 amino acid sequence was deduced from the nucleotide sequence of an isolated EST (see AAV/4138). Human FLAME-1 and FLAME-2 proteins (see AAW90107-08) are claimed. Host cells, recombinant vectors, and methods of using FLAME to identify substrates, activators or inhibitors of FLAME are provided. FLAME-1, FLAME-2 and agonists can be used to inhibit apoptosis, e.g. for treating HIV infection or Alzheimer's disease. Inhibitors of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-10-030-271-1 (1-909) x AAW90109 (1-318)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No.:
                                                      This invention describes a novel DEDD protein (I) for regulating apoptosis which has antitumor and antivital activity. (I) is expressed to biquitously and after induction of the CD95 apoptotic signalling pathway migrates to the mucleus/nucleolus where it inhibits transcription of ribosomal DNA, and thus biosynthesis of proteins, including those with anti-apoptotic activity. (I), or the DNA (II), encoding it, is used for regulation and diagnostic detection of apoptosis, particularly in cases of disease, e.g. of the immune system (e.g. acquired immune deficiency syndrome) and tumors, also for studying apoptosis or its regulation. Antibodies (Ab) specific for (I) are used to detect/quantify (I), or particularly as a function of time, also for inhibition of (II). (I) is used to raise Ab and for detection of specific autoantibodies. (II), or derived primers, can be used to detect expression and organization of the corresponding gene, also for inducing expression of (I) in vivo or in selected tissues. This sequence represents the murine DEDD protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Murine DEDD protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    В
                                                            US-10-030-271-1 (1-909)
                                                                                                                                                                                Alignment
                                                                                                                                                                                                                                       CC This invention describes a novel DEDD protein (I) for regulating CC apoptosis which has antitumor and antiviral activity. (I) is expressed CC ubiquitously and after induction of the CD95 apoptotic signalling pathway CC migrates to the nucleus/nucleolus where it inhibits transcription of CC ribosomal DNA, and thus biosynthesis of proteins, including those with CC anti-apoptotic activity. (I), or the DNA (II), encoding it, is used for regulation and diagnostic detection of apoptosis, particularly in cases CC of disease, e.g. of the immune system (e.g. acquired immune deficiency Syndrome) and tumors, also for studying apoptosis or its regulation. CC syndrome) and tumors, also for studying apoptosis or its regulation. CC particularly as a function of time, also for inhibition of (I). (I) is CC used to raise Ab and for detection of specific autoantibodies. (II), or CC used to raise Ab and for detection of specific autoantibodies. (II), or CC derived primers, can be used to detect expression and organization of the CC corresponding gene, also for inducing expression of (I) in vivo or in CC described in the method of the invention
                                                                                                                                                                                                              Sequence 318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New protein for regulating apoptosis, particularly for diagnosis or treatment of e.g. tumors and acquired immune deficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   08-JUN-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY51022;

                                                                                        CC length cDNAs defined in the specification. Where a primer set comprises:

CC (a) an oligo-dT primer and an oligonucleotide complementary to the

CC complementary strand of a polynucleotide which comprises one of the 5602

CC nucleotide sequences defined in the specification, where the

CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination

CC of an oligonucleotide comprising a sequence complementary to the

CC complementary strand of a polynucleotide which comprises a 5'-end

CC sequence and an oligonucleotide comprising a sequence complementary to a

CC polynucleotide which comprises a 3'-end sequence complementary to a

CC polynucleotide which comprises a 3'-end sequence, where the

CC confictation. The primer sets can be used in antisense therapy and in

CC gene therapy. The primers are useful for synthesising polynucleotides,

CC detection and/or diagnosis of the abnormality of the proteins encoded by

CC the full-length cDNAs. The primers are also useful for the

CC DNAS easily without any specialised methods. AAH03166 to AAH13628 and

CC CNAS easily without any specialised methods. AAH03166 to AAH13628 and

CC conspective and an oligonacid sequences; and AAH13629 to AAH13632 represent

RESULT 22
AAB94040
CC (a) an oligorithm and oligonucleotide complementary to the CC complementary strand of a polynucleotide comprises one of the 5602 CC nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC conjugate of the comprises a 1'-end sequence, where the coligonucleotide comprises a 1'-end sequence, where the coligonucleotide comprises a 1'-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in CC gene therapy. The primers are useful for synthesising polynucleotides, articularly full-length cDNAs. The primers are also useful for the CC gene therapy the cDNAs. The primers are also useful for the CC consessing without any specialised methods. AAH03166 to AAH13628 and CC CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC CDNAs easily without any specialised methods. AAH031632 represent coligonucleotides, all of which are used in the exemplification of the correspont invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

                   The invention relates to FADD-like apoptotic/anti-apoptotic proteins (FLAME 1 or 2) and nucleic acid molecules encoding such proteins. FLAME sequences are useful for inhibiting apoptosis and for gene therapy of diseases characterised by apoptosis including HIV infection and Alzheimer's disease. FLAME inhibitors are useful as a apoptotic agents and activators are useful as anti-apoptotic agents. FLAME-1 is useful as a substrate for caspase in assays to identify caspase inhibitors. The present sequence is human FLAME-2 protein
                                                                                                                                                                      Novel FADD-like apoptotic/anti-apoptotic proteins useful for inhibiting apoptosis, treating diseases characterized by apoptosis e.g. HIV infection and Alzheimer's disease, and for identifying modulators of the

                                                                                                                                      The invention relates to FADD-like apoptotic/anti-apoptotic proteins (FLAME 1 or 2) and nucleic acid molecules encoding such proteins. FLAME sequences are useful for inhibiting apoptosis and for gene therapy of diseases characterised by apoptosis including HIV infection and Alzheimer's disease. FLAME inhibitors are useful as apoptotic agents and activators are useful as anti-apoptotic agents. FLAME-1 is useful as a substrate for caspase in assays to identify caspase inhibitors. The present sequence is mouse FLAME-2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gene the FLAME-2.

C pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

C persons system, however it is particularly involved in the inflammatory the second provided in the inflammatory the second provided in the invention of the invention of sample with a binding agent that binds to the proteins of the invention of and determining the amount of bound protein in the sample. The conjugation of an antigens in the production of antibodies of polypeptides may be used as antigens in the production of antibodies of conjugation proteins. These antibodies can be used to confident expression and activity of P. acnes polypeptides and confident assential across proteins. The antibodies may also be used as conjugation and content asset (ELISA). Note: The sequence data for the protein the sequence data for the protein and the protein asset (ELISA). Note: The sequence data for the protein asset of the protein that an of the protein asset (ELISA).

The invention relates to an isolated polynuclectide (ACF64435-ACF64733) CC encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynuclectides (ABM35624-ABM64536) and to CC immunogenic fragments of P. acnes polypeptides. The invention accompasses expression vectors and host cells comprising a polynuclectide of the invention; antibodies against polypeptides of the invention; a cc method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared CC via this method; a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or CC antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient; and a method for inhibiting the development of P. acnes in a CC patient; The P. acnes polypeptides, polypucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes to polypeptides are useful for moterious, an also be used as probes or primers for cc mucleic acid hybridisation. The vaccine composition is useful for the sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polynucleotides of the convention. Note: The sequence data for this patent did not form part of invention. Note: The sequence data for this patent did not form part of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-10-030-271-1 (1-909)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Alignment Scores:
        The invention relates to novel human secreted polypeptides. The complete of the presence of the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for contentifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent concluded the proteins are useful for identifying a therapeutic agent concluded the proteins are useful for identifying a therapeutic agent concluded an interactions of the polypeptide. Vectors comprising the concluded acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as mutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon concluded in the proteins and/or nerve tissue growth or regeneration; immune suppression and/or as anti-inflammatory agents; and in treatment of leukaemias. ANU29510-AAU33304 represent the amino acid sequences of novel human of the proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; vaccination; gene therapy; nutritional supplement; stem cell proliferation; haematopolesis; nerve tissue regeneration; immune suppression; immune stimulation; anti-inflammatory; leukaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-10-030-271-1 (1-909)
polypeptides. The proteins and their associated DNA sequences are used in CC the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CP. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the CC presence or absence of P. acnes in a patient comprises contacting a CC sample with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC polypeptides may be used as antigens in the production of antibodies gpecific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and CC therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by

                                                                    Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaria. A method for detecting the

These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Zhang

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acres protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of p. acres polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; antibodies against polypeptide of the invention; a method for stimulating an immune response specific for a p. acres polypeptide and an isolated T cell population comprising T cells prepared
                                                                                                                                                                                                                                                                                                                                                                  New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Local Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mitcham
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-OCT-2001; 2001US-00978825.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       11-OCT-2002; 2002WO-US032727

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC via this method; a vaccine composition (comprising P. acnes polypeptides, compositions) or compositions, or cell populations, or cell antigen-presenting cells that express the polypeptide); a method and kit compositions, or cell compositions, or cell compositions, or cell compositions, or acnes in a composition, and a method for inhibiting the development of P. acnes in a composition. The p. acnes polypeptides, polymucleotides, antibodies, fusion compositions, T. cell populations or antigen-presenting cells that express the protections, T. cell populations or antigen-presenting or treating acne compositions are useful for diagnosing, preventing or treating acne conjugaris, or for stimulating an immune response specific for a P. acnes concein. The polymucleotides can also be used as probes or primers for concleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for predicted to be encoded by an ORF (open contained within the P. acnes polymucleotides of the concent of the contained within the P. acnes polymucleotides of the present of the present and the P. acnes polymucleotides of the present and the P. acnes polymucleotid

The invention cadditionally encompasses expression vectors and host cells comprising a composition of the invention; antibodies against polypeptides of the computation; fusion proteins comprising a polypeptide of the invention; a comethod for stimulating an immune response specific for a P. acres collypeptide and an isolated T cell population comprising P. acres polypeptides, colls that express the polypeptide; or cells prepared collypeptides, antibodies, fusion proteins, T cell populations, or complete the proteins of P. acres in a collection of the presence or absence of P. acres in a collection of the p. acres polypeptides, polymucleotides, antibodies, fusion comprising T cell populations in a collection. The P. acres polypeptides, polymucleotides, antibodies, fusion comprising the development of P. acres in a collection. The p. acres polypeptides, polymucleotides, antibodies, fusion comprising the development of P. acres in a collection. The proteins or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acres composition. The polymucleotides can also be used as probes or primers for conclete acid hybridiastion. The vaccine composition is useful for the conclete acid hybridiastion are valued as probes or primers for conclete acid hybridiastion are performing a diagnostic assay. The present concent of an immune response against P. acres, or for treating acre, and the kit is useful for performing a diagnostic assay. The present convention. Note: The sequence data for this patent did not form part of the present form part of the present of the primers for the present form part of the convention. The properties of the convention at the present of the part of the present of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cell proliferative disorder; arteriosclerosis; atherosclerosis; cirrhosis; hepatitis; polycythaemia vera; psoriasis; cancer; developmental disorder; Cushing's syndrome; hypothyroidism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            encoding a Propionibacterium acnes protein. The invention also relates polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention
03-OCT-2002; 2002US-0416205P
                                                                                    03-OCT-2003; 2003WO-US031441
                                                                                                                                                                                                                                                                                                                                                                                                                            multiple sclerosis; autoimmune disorder; inflammatory disorder; AIDS; allergy; anaemia; asthma; contact dermatitis; diabetes mellitus; reproductive disorder; infertility; endometriosis; uterine fibroid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    neurological disorder; epilepsy; stroke; Alzheimer's disease; Pick's disease; Huntington's disease; Parkinson's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human cell growth, differentiation, and death-associated protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 proteins that are associated with cell growth, differentiation, and de (CGDD). The DNA and protein sequences of the invention are useful for diagnosing, treating or preventing disorders associated with aberrant expression of CGDD, such as: cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, polycythaemia vera, psoriasis and cancers), developmental disorders (e.g. Cushing's syndrome and hypothyroidism), neurological disorders (e.g. epilepsy, stroke, Alzheimer's disease, Pick's disease, Huntington's disease, Parkinson's disease and multiple sclerosis),
                                        SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polypeptides associated with cell growth, differentiation and death, useful for diagnosing, treating or preventing e.g. atherosclerosis, psoriasis, cancers, Alzheimer's disease, AIDS, anemia, diabetes mellitus or infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tran

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a cCC sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The CC polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and CC downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as CC diagnostic agents for determining P. acnes presence, for example, by this aptent did not form nart of the printed accidingtion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Skeiky YAW, Persing DH, M

The invention also relates to complypeptides encoded by the polypucleotides (ABM35624-ABM6436) and to complypeptides encompasses expression vectors and host cells comprising a divinionally encompasses expression vectors and host cells comprising a polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polypeptide of the invention; antibodies against polypeptides of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising to the invention; a comprising to the invention; a comprising to the invention; a complypeptide and an isolated T cell population comprising T cells prepared to that this method, a vaccine composition (comprising P. acres polypeptides, polypucleotides, antibodies, fusion proteins, T cell populations, or compassing the presence or absence of P. acres in a compation, and a method for inhibiting the development of P. acres in a compation. The P. acres polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the collypeptides are useful for diagnosing, preventing or treating acres complypeptides are useful for diagnosing, preventing or treating acres completes. The polymucleotides can also be used as probes or primers for complete acid hybridisation. The vaccine composition is useful for the composition is useful for the compassition is useful for the composition of an immune response specific for a P. acres for the primers of the primers of the compassion of the state and the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly format directly format directly contained within the P. acres polymented format directly format directl
                                                                                                                                                                            US-10-030-271-1 (1-909) x ABM37948 (1-71)

cc encoding a Propionibacterium across protein. The invention also relates to cc polypeptides encoded by the polynucleotides (ABM35624-ABM64336) and to cimmunogenic fragments of P. across polypeptides. The invention companies for semention antibodies against polypeptides of the invention comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. across collected via this method; a vaccine composition (comprising P. across polypeptides, or collectides, antibodies, fusion proteins, T cell populations, or collectides, antibodies, fusion proteins, T cell populations or across in a comparising and a method for inhibiting the development of P. across in a comparising. T cell populations or across in a comparising, T cell populations or across in a comparising and a method for inhibiting the development of P. across in a comparising. T cell populations or antigen-presenting cells that express the polypeptides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the collapse of P. across in a composition. The polymucleotides are useful for diagnosing, preventing or treating across collapse across in a collapse across in a collapse to collapse across in a collapse across in a collapse collapse across in a collapse collapse collapse across in a collapse collapse collapse composition is useful for the collapse col
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.

                                                                                                                                                        CC The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnostics, therapy of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a batterial infection, for evaluating a compound, such as a polypeptide, CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC effective antibacterial targets, as targets for artibacterial drugs, CC including anti-P. aeruginosa drugs, as templates for recombinant CC production of P. aeruginosa drugs, as templates for recombinant CC components for diagnosis and/or treatment of P. aeruginosa-caused CC infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed CC specification but was obtained in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-10-030-271-1 (1-909) x ABO81797 (1-91)
                                                                                      pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

CP. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a gent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by cenzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was the printed specification, but was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and operations)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-APR-2000; 2000US-0199047P.

DB:
CC encoding a Propionibacterium acnes protein. The invention also relates to CC polypeptides encoded by the polypucleotides (ABM3524-ABM6436) and to CC immunogenic fragments of P. acnes polypeptides. The invention CC additionally encompasses expression vectors and host cells comprising a polypucleotide of the invention; antibodies against polypeptides of the invention; a comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes cC wished this method; a vaccine composition (comprising P. acnes polypeptides, or cc antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a cc patient; and a method for inhibiting the development of P. acnes in a patient. The P. acnes polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides, acnes in a cc patient. The P. acnes polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne proteins. T cell populations or antigen-presenting cells that express the collection of an immune response specific for a P. acnes concerns to the polypeptides are useful for performing a diagnostion is useful for the cc and the kit is useful for performing a diagnostic assay. The present cc and the kit is useful for performing a diagnostic assay. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-10-030-271-1 (1-909) x AAU46695 (1-125)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Percent Similarity: Best Local Similarity:

CC AAE03127-AAE03150 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the presence of CC amount of the new protein in a sample or by determining the presence of CC and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC ardiovascular disorders, angiogenic disorders, atherosclerosis, CC parkinsons's disease), cognitive disorders, sidney disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound bealing and epithelial cell proliferation, to prevent skin aging due to Sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used to aid wound be specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked in munosorbent assay (ELISA). The present sequence represents a human cc content of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-10-030-271-1 (1-909)

The protein are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis).
                                                                                                                                   immunosuppressive; antiinflammatory; antiasthmatic; antiallergic; cytostatic; cerebroprotective; neuronrotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12-APR-2000; 2000US-0229358P

                                                                                                                                                                                                                                             CC neurodegenerative disorders, or polypeptides comprising an amino acid controlled the polypeptides or polypeptides, who can be sequence at least 95% identical to the new sequences. The polypeptides, and the polypeptides, and to the polypeptides, mucleic compositions for diagnosing, treating or preventing an e.g. immune compositions for diagnosing, treating or preventing an e.g. immune compositions for diagnosing, treating or preventing an e.g. immune compositions for crohn's disease), respiratory disorders (e.g. asthma and compositions (e.g. gastric, ovarian or lung cancer), CNS disorders (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative disorders (e.g. parkinson's disease or Alzheimer's disease), and controlling gene expression through triple helix formation or antisense DNA or RNA, in gene therapy, for identification, chromosome comminute biological samples, in forensic biology, and as hybridization or antisense DNA or RNA, in gene therapy, for identifying individuals corresponds. The polypeptides are useful for as molecular weight markers on consoling reproductive polyacrylamide gel electrophoresis (SDS-PAGE) gels, to raise antibodies, for testing biological activities, and for treating or preventing neural disorders, immune system disorders, and consoling reproductive and/or cancerous diseases. This sequence corresponds to one of the polypeptide of the invention. Note: The sequence corresponds consoling in electronic format directly from WIPO at the polypeptide of the sequence of the invention.

Cd disorder in a patient computation of treating a unbound of treating a disease of cd disorder in a patient comprising the step of administering the albumin compositions that is modulated by Therapeutic protein: X, or its fragment or variant; a method of extending the shelf life of Therapeutic protein: X or its fragment or variant; a nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The calbumin fusion protein and its compositions have the following consteopathic, dermatological, antianaemic, antiarthritic, antiasthmatic, anti-conspositions have the following cardiant, nootropic, antilpaemic, nephrotropic, unropathic, antiarrhythmic, cardiant, nootropic, antilpaemic, nephrotropic, unropathic, anabolic, hypertensive, and vulnerary. The albumin fusion protein nucleic acid may be useful for diagnosing, treating, preventing or ameliorating diseases or disorders comprising indication; Y. The diseases or disorders include: cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer), cautoimmune or haematopoietic diseases (e.g. anaemia, Hodgkin's disease, acute lymphocytic anaemia, multiple myeloma, arthritis, asthma, AIDS, cautoimmune disease, inflammatory bowel disease, psoriasis or Lyme CC disease), reproductive system disorders (e.g. prostaticis, inguinal hernia, varicocele, penile carcinoma, ovarian adenocarcinoma or Sertoliporet's disease. sestemic lungus evythematosus, cout. muscular dystrophy
  New albumin fusion proteins, useful for diagnosing, treating, or ameliorating diseases or disorders e.g. cancer, anemia, ar asthma, inflammatory bowel disease or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;
                Paget's disease, systemic lupus erythematosus, gout, muscular dystrophy or cachexia), cardiovascular disease (e.g. rhabdomyomas, heart disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel albumin fusion protein. The invention relates to: a composition comprising the albumin fusion partial and a pharmaceutical carrier; a kit comprising the composition of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; SEQ ID NO 369; 279pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rosen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel isolated nucleic acid molecule comprising a sequence that encodes a thioesterase or thioesterase domain, derived from a bacterial daptomycin biosynthetic gene cluster. The proteins of the invention have antibacterial, fungicide, virucide, antiparasitic, immunomodulator, antilipemic, and cytostatic activity. The polynucleotides may have a use in gene therapy. The compositions and methods of the present invention are useful for generating novel linear and cyclic peptides and improving yield of a product in a cell expressing and appromycin non-ribosomal pure compounds, such as antibiotics, antifungals, antivirals, antiparasitics, antimitotics, antitumour agents, immunomodulatory agents, anti-cholesterolemic agents, siderophores, agrochemicals and cytostatics. The sequences shown in ABP62784-ABQ62808 represent proteins encoded by genes derived from a S. roseosporus
                                                                                                                                                                                                                                                                                                                                                                                                                                                            06-AUG-2001; 2001US-0310385P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Local Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosts and continuous as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a pathological infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                             CC AAF71138 to AAF71357 encode the Corynebacterium glutamicum homeostasis CC and adaptation (HA) proteins given in ABF9023 to AAB79242. The C. CC glutamicum HA genes (I) can be used in vectors for expression in host Cells and production of fine chemicals, such as, an organic acid, proteinogenic or nonproteinogenic amino acid (preferred), purine or CC proteinogenic or nonproteinogenic amino acid (preferred), purine or CC proteinogenic or nonproteinogenic amino acid (preferred), purine or CC proteinogenic or nonproteinogenic amino acid (preferred), purine or CC proteinogenic or nonproteinogenic amino acid (preferred), purine or CC proteinogenic, or nonproteinogenic acid, saturated or unsaturated or carbohydrate, aromatic compound, vitamin, cofactor, CC polyketide or enzyme. The amino acids produced can be lysine, glutamine, cor plutamate, serine, threonine, glutamine, cor cysteine, valine, leucine, isolaucine, serine, threonine, methionine, cor tyrosine, phenylalanine, or tryptophan. The fine chemical production can be modulated. The presence of (I) or Ha proteins encoded by then are used CC proteins encoded by the C. glutamicum genome or can be used as markers CC grenetically engineered Corynebacterium or Brevibacterium. The HA CC glutamicum or help the microorganism to adapt to different environmental conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09-JUL-1999;
